One of the most important decisions of the tattoo process will be determining whether your design should be in color or black and gray. Maybe you haven't given much more than getting a tattoo thought. But your body and future both deserve a little more. Tattoos are not only an expressive and artistic statement, but also must coincide with any future work. Otherwise you run the risk of looking like a walking sticker or note. Sure, you can dress that up with borders and frames, but in the real world and over time, your tattoos should tell a story with purpose. Otherwise, why are they the heck you made them permanent? A black-and-grey tattoo has a number of advantages. There is much less chance of fading, except for a lighter shade of gray. The biggest risk is the realism aspect of this style that many artists aspire to, but few can achieve without a lot of practice and natural talent. If you want a simple tattoo that will stand the test of time in a more classic sense, I would advise just a few shades of black and gray. Do your homework and check portfolios and find an artist who specializes in realism. For every black and gray customer there is colorful and they don't want anything more than for their tattoos to make a statement. If you're from this genre, you've probably already started scouring fine art portfolios, New School, Old School traditional and other designs. Whether it's a full sleeve filled with mermaids, oceans and shells, or a simple heart tattoo that's bright and full of colorful red ink, finding a talented color tattoo artist can be just as laborious. When sucking out color tattoo briefcases, be sure to check out healed tattoos. Most tattoos look better after being done, so let it be time to tell the true story. Are the images blurry, the color soft or faded? Caution! The artist designs the work with such purposeful details that even now it looks bold and brilliant? She's your artist! Be very selective in the genre of colored tattoos. The basis of your solution is the portfolio, the experience of your artist, and, where possible, their reputation. Any experienced artist should have several years of mentoring under their belt to find out who taught them the skills and then research what the artist and their basic teachings are. Tattooing postoperative is subjective and opinion. Some artists recommend Vaseline, others beg you to use products designed specifically for postoperative care. The retail aspect of tattoos has grown and this can mean that you have sold something that you may not need. Remember the basics of tattooing. Do not choose scabs, do not immerse in water, and keep the structure covered for at least 24 hours after service. Protect your tattoo from fading by wearing a daily sunscreen contains at least SPF 35. If you dream of being in color or black and gray, use Vaseline or spendy skin care for enriching postoperative lotions, the end result is to bear you. Rest assured, you have considered both the style and the implications of bright or classic design, design. Be sure tattoo can become a permanent and merciful addition to your body. Grey shades have gained popularity over the past few years as a go-to choice for decorators wanting to add chic, urban sophistication to their rooms. Combined with furniture and trim in light, neutral shades, a dark grey accent can become a bold focal point. In addition, the right decor and grey wall combination can work well with a handful of bright, colorful accents such as a shiny green lamp or a metallic red chair. But this bold style is not for everyone and it can come across as an introduction if the buyer does not expect it. The key to using gray effectively when selling your home is to pair the right shade with the overall feel of your home. If you are selling a trendy urban loft, for example, you may be able to use dark gray to enhance the effect of sleek, modern furniture. The same color will look completely out of place in a traditional house with conservative furniture. In this case, you can use light gray to bring a sense of coolness to the bedroom (since many gray borders on shades of blue, their soothing effects may be similar) Source: Demesne. You may be able to find more information about this and similar content on piano.io If you've ever relied on white camera balancing algorithms you know how imperfect they can be, but you're out of luck. Getting an accurate color balance with almost any camera is pretty easy with an 18% grey card. Grey map for staged photosY you might think it makes more sense to balance white in the images, given that the term we use most often is white balance, but since we are looking all around the accuracy of color the best balancer is gray. Why? It's a medium tone, and it's neutral. If you're sampling a white-colored balance you're just sampling the high end of the spectrum (or pure white if your photo is overexposed). In fact, when your camera is white balancing it is (usually) looking for a neutral gray Using 18% gray cards to basically tell your camera, see neutral gray here! Technology blog Tested explains how to use a grey map for portrait photo: Place Place Map where the object will be, so that the light is hitting the gray card just like the light hitting the subject. When taking a portrait, hold your subject to hold a gray card in front of their face for a test shot. When processing photos later in Photoshop, take a look at the test shot. Enter the image of the menu's levels and click on the middle eye drop icon. Save the level adjustment and then upload it to any other photos in these lighting conditions. You just color corrected your pictures with a gray card. A grey card for everyday PhotosG/O Media can get commissioned although it's always best to have a link shot with a gray card in your photos, if you want to edit them later, a gray card can help you for your everyday shots as well. If you're staying in one common place, say, for a family barbecue or someone's birthday, you can use a gray card to manually balance your camera. How this will work will vary from camera to camera, but overall you will find this option where you will find a white balance setting. From there, all you really have to do is make sure the card fills most of the frame as you say your camera is white balance based on what it is currently looking at. If lighting conditions remain generally the same throughout the day, manually setting the balance of the white color of the camera with a gray card, you should get a better, more accurate color for all your shots. Just remember that you will need to balance every time you move places, or turn the automatic white balancing back if you feel lazy. Create a grey card While you can pick up an 18% gray card in most photography stores, you basically buy a piece of gray board. The advantage of buying a card is that you know you get exactly 18% gray. If your photos don't go on the cover of the magazine and you just want better accuracy overall, you can print out a gray card from your computer. If you just pick a mid-road grey and print it out, it will be a good start. Here's an easy way to do it: An easy way to do this is to open Photoshop (or any image editor that can handle layers) and make a new document that's 8.5 x 11 and has a white background. Make a new layer and fill it with black. Reduce the opacity of this layer to 50%. Print.If your printer has a color profile, you can switch to this before printing for more accurate results. I did this with a cheap laser printer, however, and it worked very well. My gray card was uneven and pretty awful overall, but I still end up with a better and more accurate color than the automatic white camera balance. The correct grey card is definitely better, but when you need something quickly you can get even with this pretty inaccurate method. Of course, if you want to do really accurate card you have to go for it. There's a great explanation for finding 18% gray on photo.net forums that will help you get there. For other great color tips, check out our guide to The best color of your photos. Black and white has long been the default artistic style for photos, so it can be easy ...
